

# AGILE SCRUM + KANBAN

*Learn, Play, Network*

# WHAT IS AGILE?

## Agile Manifesto

"We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value:

- Individuals and interactions** over processes and tools
- Working software** over comprehensive documentation
- Customer collaboration** over contract negotiation
- Responding to change** over following a plan

That is, while there is value in the items on the **right**, we value the items on the **left** more."

**Agile is a framework and there are a number of specific methods within the Agile movement.**

# WHY?

- ✓ Adaptability to changing market / customer needs
- ✓ Better cost efficiencies and fastest time to market
- ✓ Improved quality, satisfaction, and project success

**Waterfall**

**Agile**

**Project Timeline**

# AGILE METHODS

## Scrum:

Scrum is one of the most popular ways to implement Agile. It is an iterative software model that follows a set of roles, responsibilities, and meetings that never change. Sprints, usually lasting one to two weeks, allow the team to deliver software on a regular basis

## Kanban:

Kanban, meaning “visual sign” or “card” in Japanese, is a visual framework to implement Agile. It promotes small, continuous changes to your current system. Its principles include: visualize the workflow, limit work in progress, manage and enhance the flow, make policies explicit, and continuously improve.

**Extreme Programming (XP):** Also known as XP, Extreme. The principles of XP include feedback, assuming simplicity, and embracing change.

**Feature-driven development (FDD):** . There are five basic activities in FDD: develop overall model, build feature list, plan by feature, design by feature, and build by feature.

**Adaptive system development (ASD):** ASD has a cycle of three repeating series: speculate, collaborate, and learn.

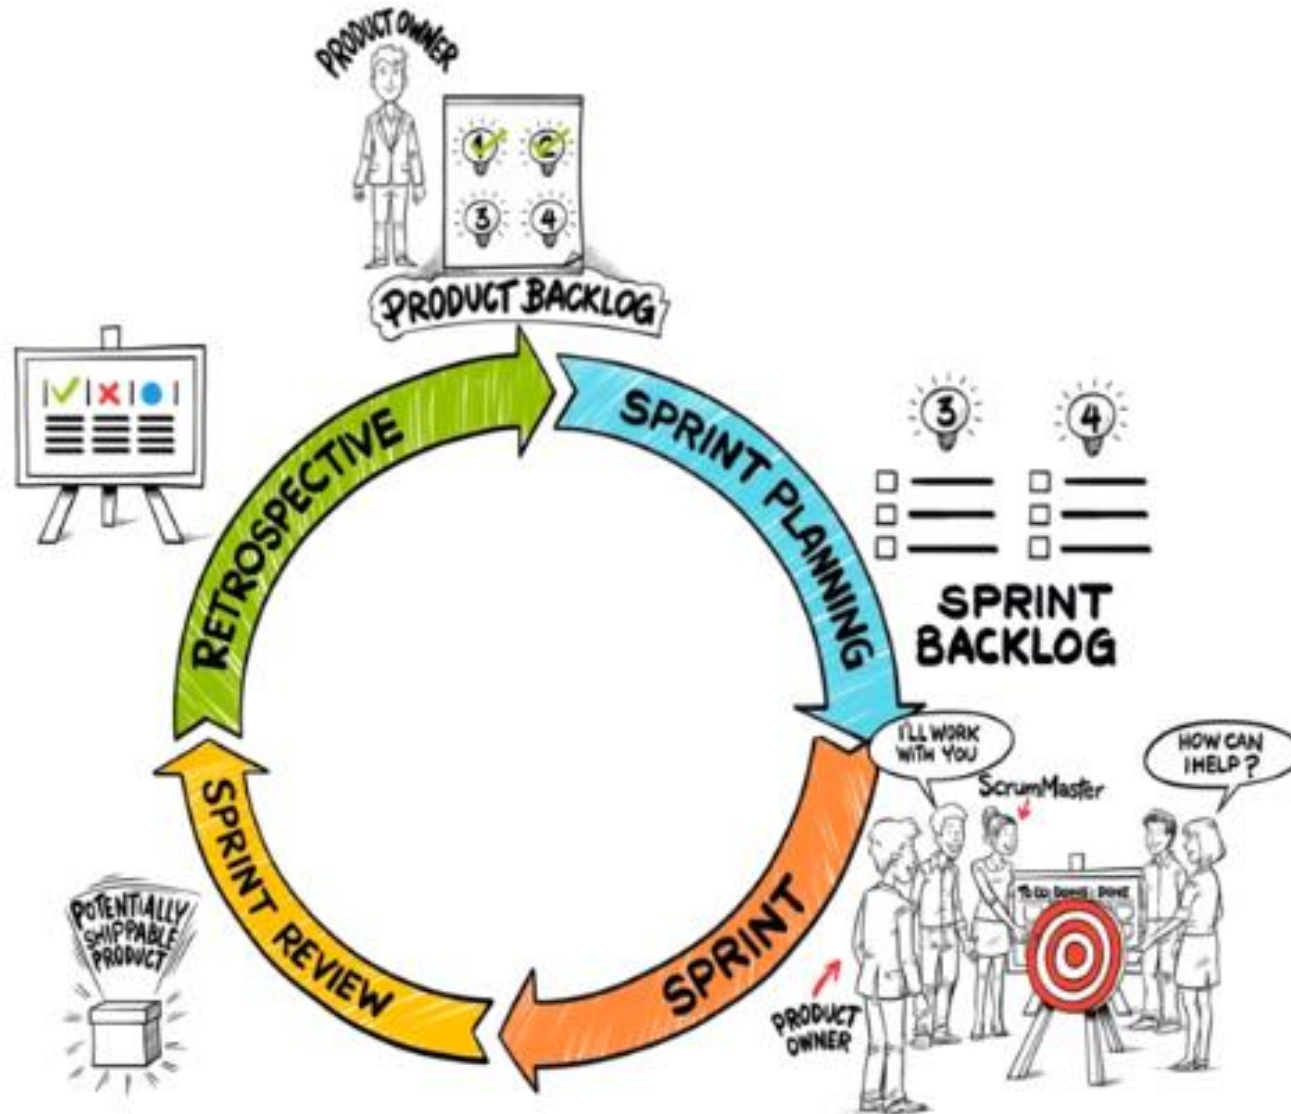

**Dynamic Systems Development Method (DSDM):** The eight principles of DSDM are: focus on the business need, deliver on time, collaborate, never compromise quality, build incrementally from firm foundations, develop iteratively, communicate continuously and clearly, and demonstrate control.

**Lean Software Development (LSD):** It can be characterized by seven principles: eliminate waste, amplify learning, decide as late as possible, deliver as fast as possible, empower the team, build integrity in, and see the whole.

**Crystal Clear:** Crystal Clear requires the following: frequent delivery of usable code to users, reflective improvement, and osmotic communication preferably by being co-located.

# SCRUM

Sprints – Fixed length iterations.  
Working, tested, potentially shippable product during every sprint.  
Teams should work together vs big handoffs.

Scrum Framework consists of scrum teams and their associated roles, events, artifacts, and rules.

- 3 roles
- 4 artifacts
- 4 events within each sprint
- **Definitions of Done**

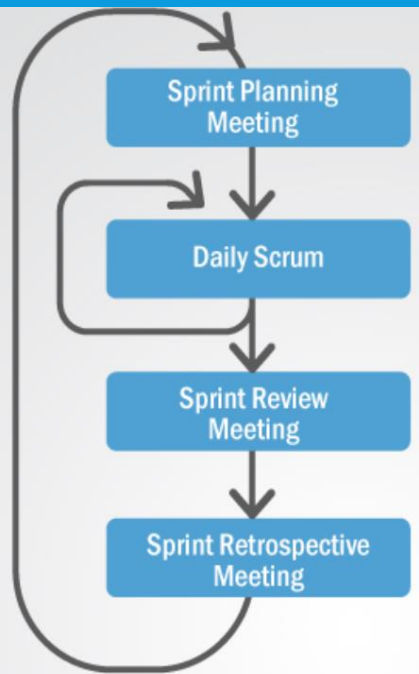

# SCRUM ROLES

Waterfall	Agile / Scrum		Role
Project Owner Business Owner Project Sponsor	Product Owner	 <b>Product Owner</b>	VISION - Responsible for ROI Final arbiter of requirements questions Focus: WHAT vs HOW Describes the <b>Highest Priority stories</b>
Project Manager	ScrumMaster	 <b>Scrum Master</b>	Facilitates ceremonies Removes roadblocks  Protects the team
Team	Team <i>Usually 7 (+/- 2) people,            Co-located, small            teams, collaborates,            self organized, cross            functional, dedicated</i>		Does the work With the Product Owner, <b>drives clarity</b> to decide which stories they can commit to in a given sprint.

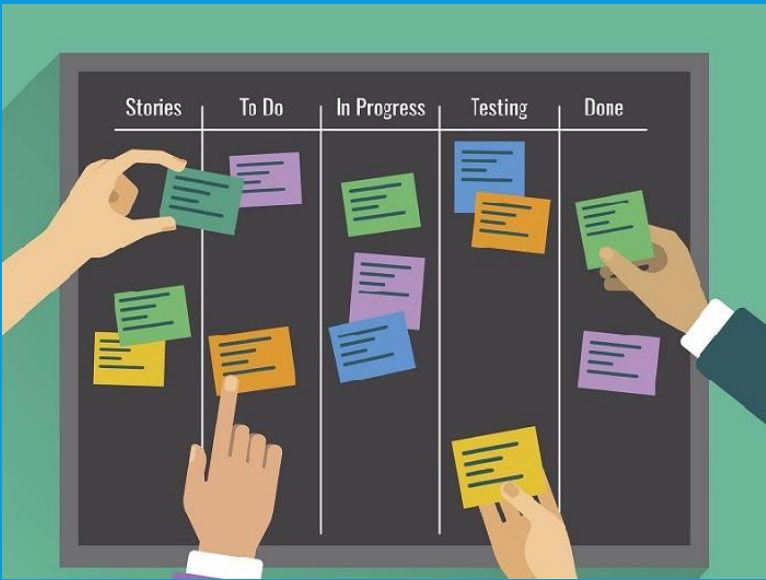

# SCRUM EVENTS

Sprint = 2-4 weeks  
Plan – Do – Check - Act

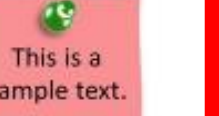

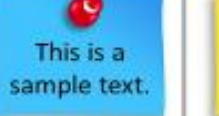

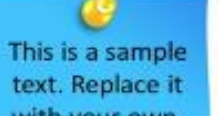

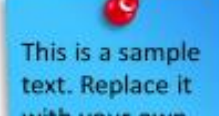

Event	Purpose	Frequency	Comments
Product Backlog Grooming	Prioritization What is next?	During / Before Sprint 2-4 hours	Need to have backlog prioritized for next Sprint Planning Session
Sprint Planning	Plan sprint goals, Estimate	Beginning of the Sprint 2-8 hours	Identify what User Stories will be included in Sprint, break down User Stories to tasks and estimate. Commit to the User Stories
Daily Standup	Keep each other accountable	Everyday 15 min	What happened yesterday, what will be done today, any impediments?
Sprint Review	Customer involvement	During Sprint 2-4 hours	Demo to customer, get feedback Show team accomplishments
Sprint Retrospective	Continuous Improvements	End of Sprint 1-3 hours	Review what went well, what is not working, what should we start doing

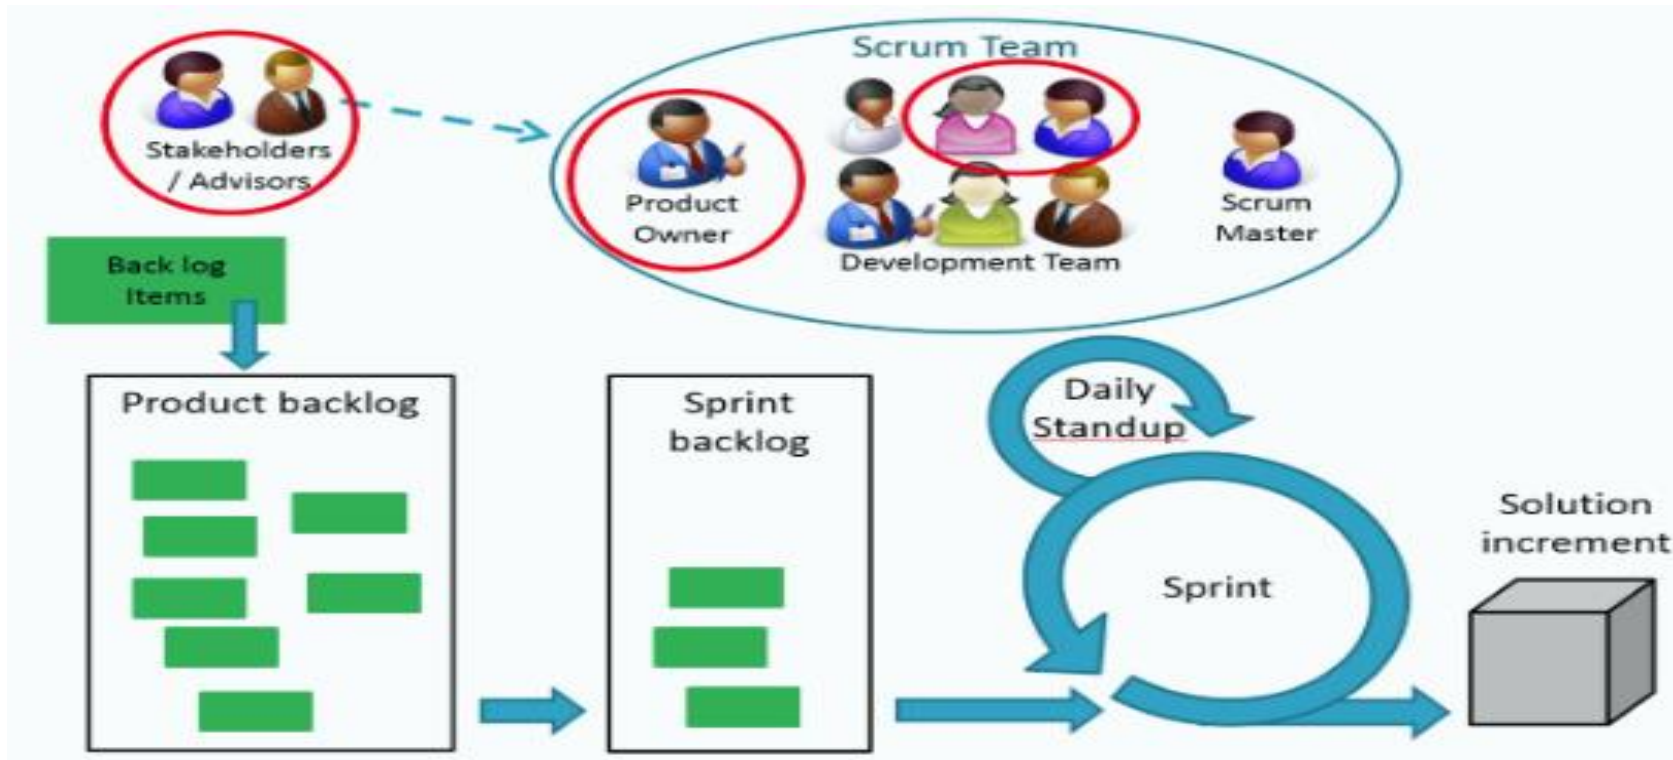

# KANBAN BOARD

Team members pull from the board one task at a time

Stories	To Do	In Progress	Testing	Done
 <p>This is a sample text. Replace it with your own text.</p>	 <p>This is a sample text. Replace it with your own text.</p>  <p>This is a sample text. 1. Product Backlog: Organize Team - Build list of Items, prioritize
2. Sprint Planning Estimate tasks for top priority items
3. Day in the Life - Day 1 - Start your sprint
4. Day in the Life Day 2 – Continue through your sprint
5. Day in the Life Day 3 – Continue through your sprint
6. Sprint Retrospective Inspect & Adapt Team Processes

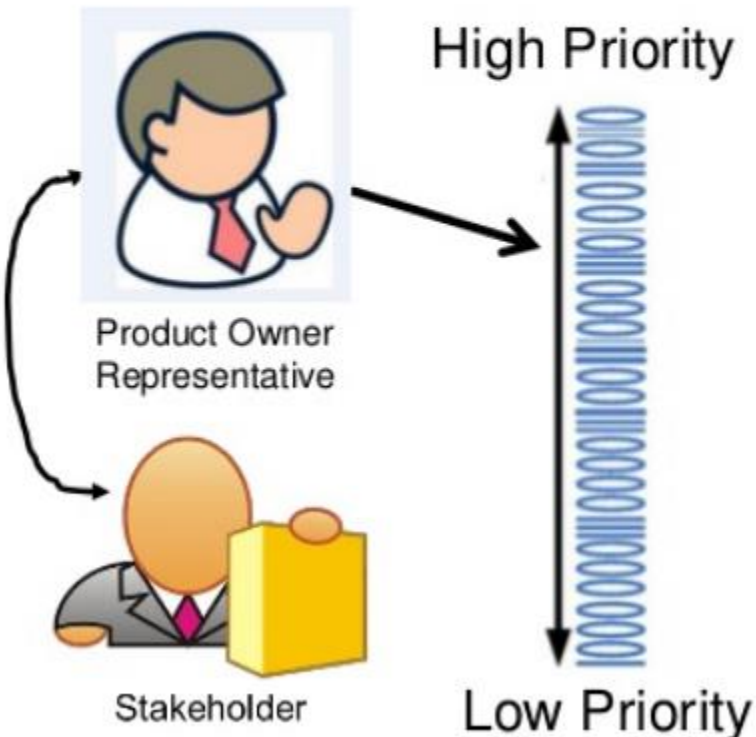

# TEAM PROJECT - BUILD "SPRINTSVILLE"

# PRODUCT BACKLOG GROOMING

## Backlog Grooming

As the user stories approach the top of the product backlog, the POR will review ready stories with Stakeholders to ensure stories are still ready and clear.

- Usually a separate meeting, approx. 2 hours
- Decomposition of large PBI's into smaller ones
- Estimate effort (Story Points)
- Clarification of requirements
- Prioritize

# PRODUCT BACKLOG GROOMING

## USER STORY

- Independent
- Negotiable
- Valuable
- Estimable
- Small
- Testable

*As a < type of user >, I want < some goal > so that < some reason >.*

### **Apartment Building:**

As a resident of Sprintsville, I want to live in an apartment building close to my office so that I can walk to work.

### Acceptance Criteria:

- Building is at least 5 floors
- Apartments have small decks off patio door

# PRODUCT BACKLOG GROOMING USER STORY POINTS

- User Stories – estimated in Story Points (Product Backlog Grooming)
- Tasks – estimated in hours (Sprint Planning)

Start estimation with T-Shirt sizes and later transfer to points.

### Story Points

• We use relative complexity buckets to size each story.

The diagram shows seven buckets of increasing size, each labeled with a number from the Fibonacci sequence: 1, 2, 3, 5, 8, 13, and 21+. Below each bucket is a label: Smallest, Small, Medium, Med-large, Large, Very Large, and EPIC!.

Bucket Size	Story Points	Label
Smallest	1	Smallest
Small	2	Small
Medium	3	Medium
Med-large	5	Med-large
Large	8	Large
Very Large	13	Very Large
EPIC!	21+	EPIC!

Fibonacci Sequence = Each number is 60% increase

# PRODUCT BACKLOG GROOMING

## PROJECT TIME – 3 MINUTES

1. Organize team: Product Owner, ScrumMaster, and working team
2. Brainstorm user stories to add to Product Backlog
3. Product Owner – Prioritizes backlog
4. Team estimates (S,M,L) top user stories and figures out how much they can commit to.
5. Identify the line – What stories will you complete in Sprint 1?

**You will have (3) Days in your Sprint      Day=4 minutes**

Move your stories to “NEW” column in your KANBAN board

**PRODUCT BACKLOG:**  
Everything we might ever do

# SPRINT BACKLOG

## PRODUCT BACKLOG

- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item

## SPRINT BACKLOG

- Product Backlog Item
- Product Backlog Item
- Product Backlog Item
- Product Backlog Item

### NOT STARTED

# SPRINT PLANNING

Timebox:  
4 hours

PRODUCT BACKLOG:  
Everything we might ever do

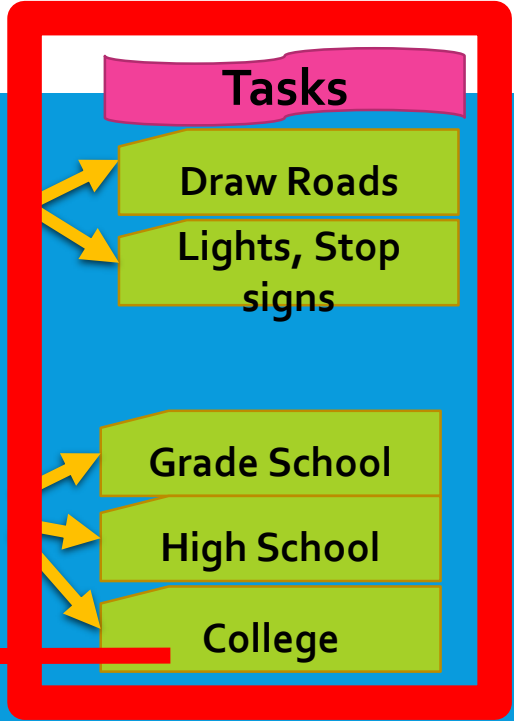

- Team estimates the PBI's using Story Points
- Team selects the top Product Backlog items that they can commit to during the sprint and moves them to Spring Backlog.
- During Sprint – these items are the commitment, nothing gets added.

## User Story

- Roads **M**
- Vehicles **S**
- Housing **L**
- School **M**
- Energy **S**
- Office
- Park
- Store
- Landscape
- Airport

## Tasks

# SPRINT PLANNING

PROJECT TIME – 3 MINUTES

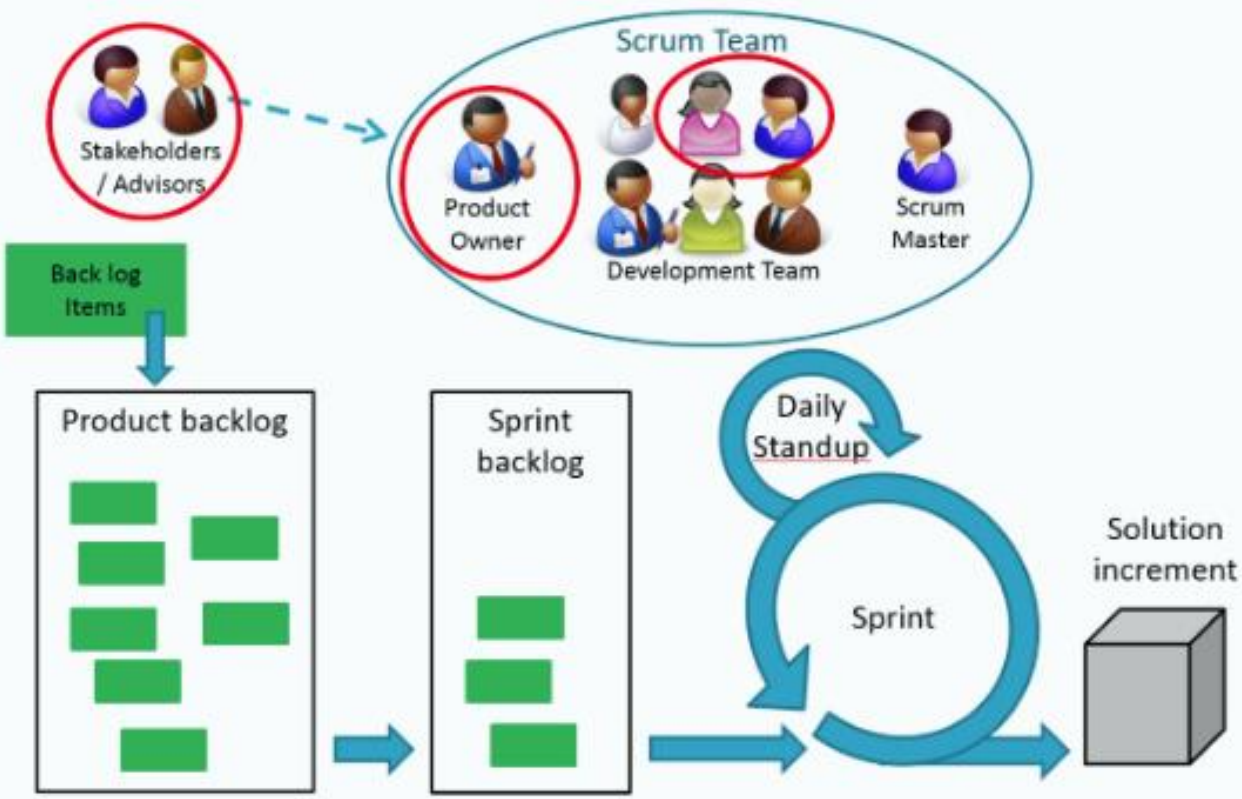

Using Committed User Stories  
for the sprint –

- Create Tasks
- Estimate tasks in time

Commit to the Sprint

- 3 days – 4 min/day

To Do		In Progress	Testing	Done
<p>This is a sample text. Replace it with your own text.</p> <p>This is a sample text. Replace it with your own text.</p>	<p>This is a sample text. TIME TO START YOUR SPRINT

# SPRINT (DAILY STANDUP, ACTIVITIES)

## PROJECT TIME – 4 MINUTES DAY 1

**Daily Scrum:** 1) What to do today

**Work Time:** Each team member takes a task and moves it to “In Progress”  
*Too much WIP is not efficient. Tasks should be pulled by team member when they are ready to work on it*

- **ScrumMaster** protects team from Product Owner asking for more work, remove roadblocks
- **Product Owner** – available during Sprint to make final call about requirements / questions.

Meet with Product Owner – Sprint Review – PO declares “DONE”

# Update KANBAN Board

# STOP – DAY 1 OVER

BurnDown Charts – How much work is left in Sprint?

Story Name	Task No	Task Description	Status	Owner	Estimated Effort (in Hours)	Effort Remaining (in Hours)
Story 1	1	POC for Story 1	In Progress	Developer 1	10	6
	2	Requirement Clarification with PO	Closed	BA	8	0
	3	Develop modules	Open	Developer2	12	12

**Sprint Duration** – 2 weeks  
**Team Size** - 7  
**Hours/Day** – 6  
**Total Capacity** – 420 hours

# SPRINT (DAILY STANDUP, ACTIVITIES)

## PROJECT TIME – 4 MINUTES DAY 2

**Daily Scrum:** 1) What did I do yesterday 2) What will I do today 3) Any issues?

**Work Time:** Each team member takes a task and moves it to “In Progress”

*Too much WIP is not efficient. Tasks should be pulled by team member when they are ready to work on it*

- **ScrumMaster** protects team from Product Owner asking for more work, remove roadblocks
- **Product Owner** – available during Sprint to make final call about requirements / questions.

Meet with Product Owner – Sprint Review – PO declares “DONE”

# Update KANBAN Board

# SPRINT (DAILY STANDUP, ACTIVITIES)

## PROJECT TIME – 4 MINUTES DAY 3

**Daily Scrum:** 1) What did I do yesterday 2) What will I do today 3) Any issues?

**Work Time:** Each team member takes a task and moves it to “In Progress”

*Too much WIP is not efficient. Tasks should be pulled by team member when they are ready to work on it*

- **ScrumMaster** protects team from Product Owner asking for more work, remove roadblocks
- **Product Owner** – available during Sprint to make final call about requirements / questions.

Meet with Product Owner – Sprint Review – PO declares “DONE”

# Update KANBAN Board

STOP – DAY 3 OVER

Sprint is over

# MEASUREMENTS - VELOCITY

Using our relative sizing numbers, our velocity works out to 8 story points this Sprint.

$$4 + 2 + 2 = 8$$

## PBI's DONE/VELOCITY

### View Grades, current semester

As a student, I can see my grades online so that I don't have to wait until I get to school to know whether I'm passing.

Acceptance Criteria: Columns align neatly on Fingerly 4.1 and iPhone.

EFFORT: SMALL

### Update Grades, current semester

As a teacher, I can update grades online so I no longer depend on administrators to do it for me.

EFFORT: MEDIUM

### View Grades, previous semester

As a student I can see my previous semester grades online so that, I don't have to wait until I get to school to know my previous grades.

Acceptance Criteria: Columns align neatly on Fingerly 4.1 and iPhone.

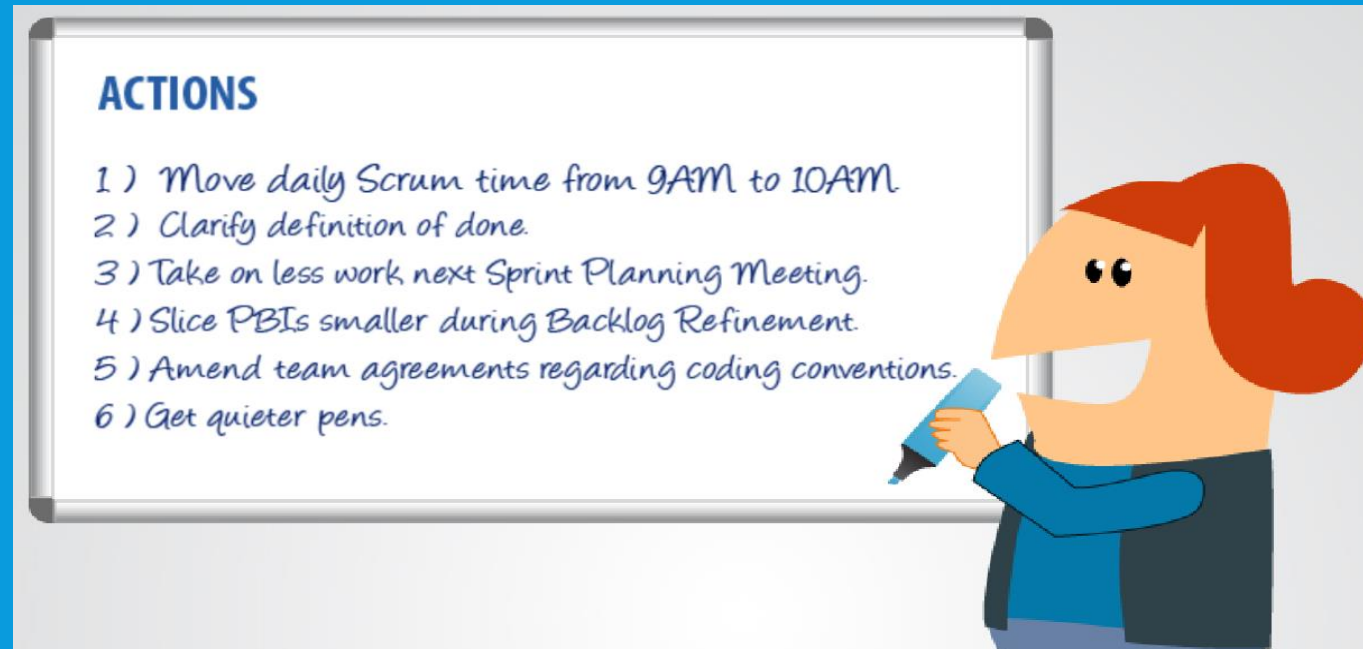

EFFORT: SMALL

- Unfinished work – returned to Product Backlog (even almost done)
- Velocity: How many Story Points were completed in Sprint?
- Only DONE work gets counted as “Velocity” for Sprint

If Velocity stays stable over several sprints; Product Owner can use Velocity to forecast how much can be done in a Sprint

# SPRINT RETROSPECTIVE

- Team to Inspect and Adapt on the PROCESS
- START, STOP, CONTINUE
- During the Sprint Reviews with the Product Owner; Inspect & Adapt was on the Product

# SPRINT RETROSPECTIVE

## PROJECT TIME – 3 MINUTES

- Talk amongst your team
- Remember it's about improving the process
- **Start - Stop - Continue**
- 1. What should we start doing?
- 2. What need to stop doing or improving?
- 3. What went well, make sure to continue?
