- Twitter
- Facebook

Lessons Learned

- Process
- Requirements
- Stakeholders
- Budget

History of 511

- 1999 USDOT petitioned FCC
 - 17 state DOTs
 - 32 transit operators
 - 23 metro planning organizations & local agencies
- 2000 FCC designated “511”
 - Design & coordination left up to those who deployed
 - Deployed by DOTs and metro planning organizations

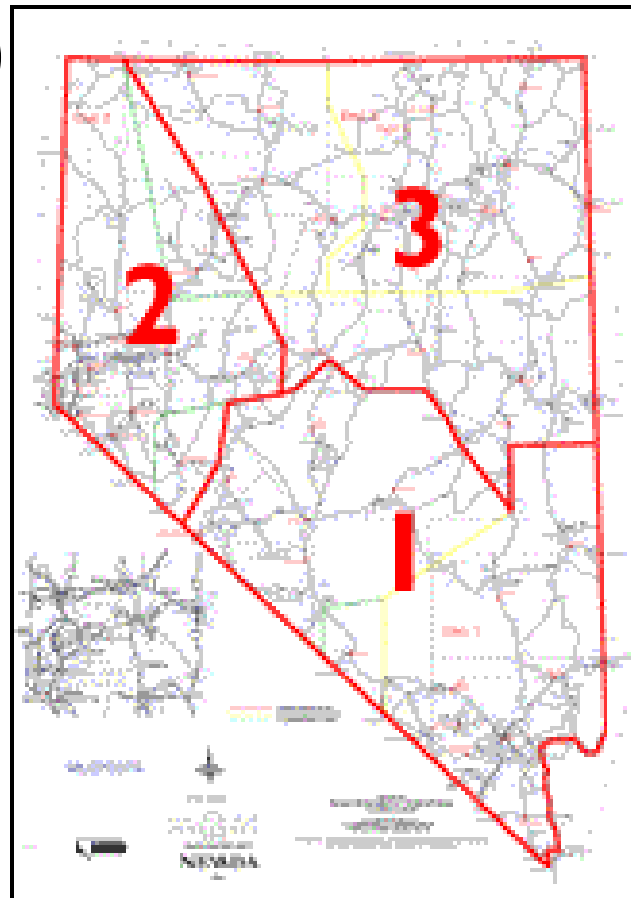

State of 511

- As of 2011
 - 51 systems
 - 37 states
 - Interactive Voice Response (IVR)
 - Websites

NDOT Operations

- Road Operations Centers
 - Las Vegas (District 1)
 - Reno (District 2)
 - Elko (District 3)

Status Quo of 511

- NDOT early adopter of 511
- 2006 Meridian System
- Contract expired May 2013
- Comfort zone

Beginning of Project

- Next Generation 511 started in 2011
- Formal process followed by NDOT
- Hired consultant to help prepare documentation, requirements, and prepare RFP
- Proposed \$1 M, Reduced budget to \$½ M
- Followed the Systems Engineering process dictated by federal government

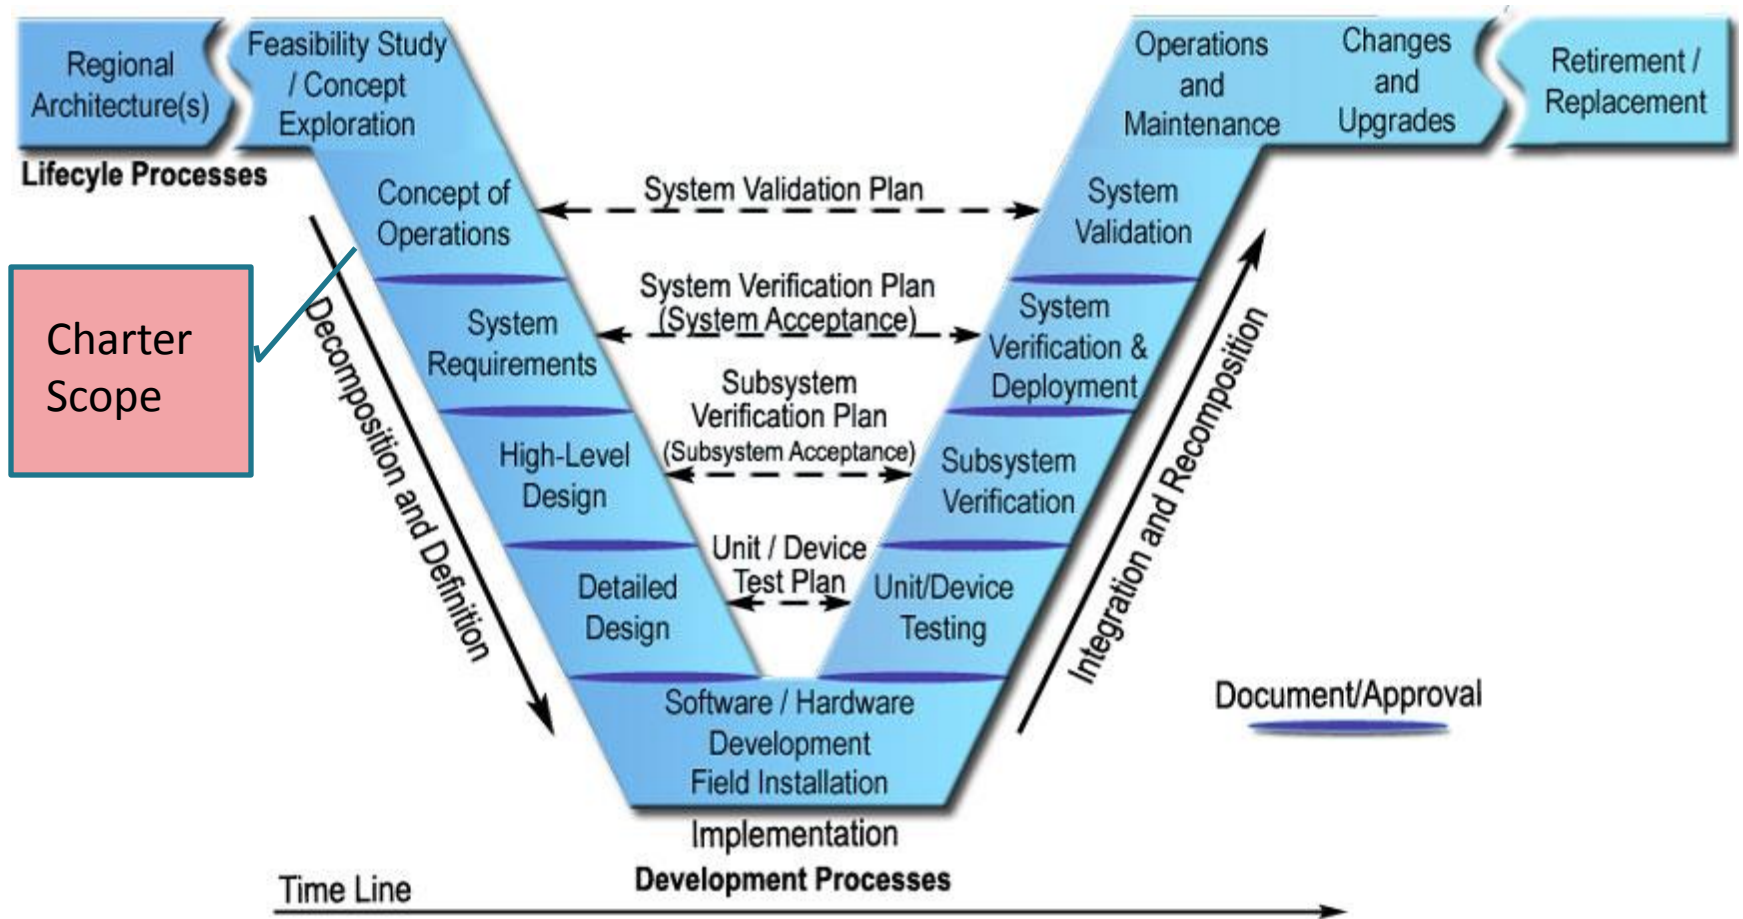

Lesson Learned--Process

- Followed the System Engineering Process, PMBOK Process, Waterfall Development
- Consultant was new PMP
- First Traffic Operations project using System Engineering Process
- Required to follow NDOT procurement process

System Engineering Process

Concept of Operations

- Hired consultant to prepare Concept of Operations
- Who, what, when, where, and why
- Decision to procure
 - Advances in technology
 - Additional data
 - Additional channels of communication
 - Reduce duplication of effort
 - Reduce redundancy of data dissemination
 - Reduce errors

Nevada Next Generation 511 Project

- General Goals
 - Improve usability and ease for the public
 - Scalable, to handle new data input as it becomes available
 - A one-stop-shop for multi-modal traveler information
 - Make use of advances in technology
 - Both regional and statewide focused
 - Consider Nevada's texting while driving ban, in effect Jan 2012

Nevada Next Generation 511 Project

- **Functionality and Dissemination**
 - Mostly automated system
 - But with a manual conditions reporting interface
 - Call transfers and web links to transit, NHP and partner agencies
 - Personalization for registered users
- **Dissemination Channels**
 - Enhanced email and text alerting system
 - Mobile applications
 - Regional Twitter and Facebook feeds
 - Updated automatically

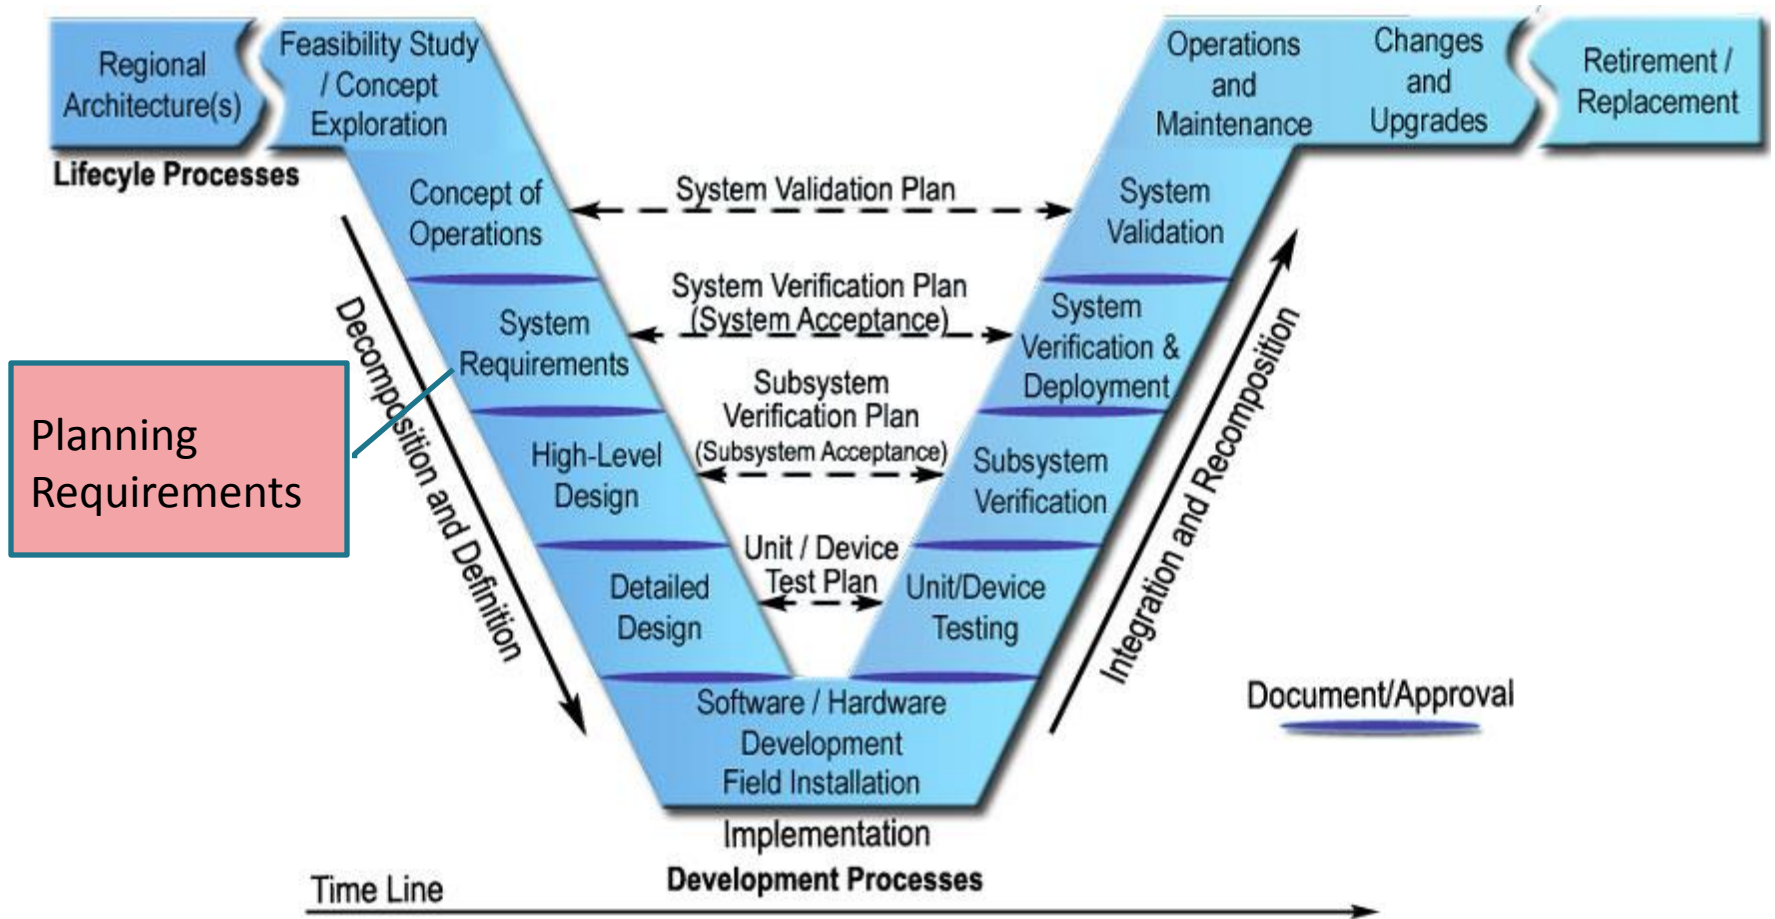

Nevada Next Generation 511 Project

- Content
 - Incidents, construction, controls, congestion, road weather conditions on NDOT roads shown with icons
 - Travel times where available
 - CCTV streaming video
 - DMS (Dynamic Message Signs)
 - RWIS (Road Weather Information System)
 - HAR (Highway Advisory Radio) message text online
 - More detailed and interactive map

System Engineering Process

Lesson Learned--Requirements

- Written
- Testable
- Specific
- User driven

Types of Requirements Identified

- Functional
 - *“Each floodgate message shall be able to be designated as uninterruptible or interruptible.”*
- Transition
 - *“The Nevada Next Generation 511 shall use standards that support open architecture and interoperability with the other NDOT systems needed to support traveler information.”*
- Project
 - *“The vendor shall provide a project manager throughout the life of the project who does not change without the written permission of NDOT.”*

Types of Requirements Identified

- Quality
 - *“The data fusion function availability shall be 99.80% or greater each 24 hour period as measured from midnight to midnight exclusive of planned downtime for maintenance.”*
- Business
 - *“The Nevada Next Generation 511 shall minimize the time it takes for users to gain access to the system and obtain their desired information.”*
- Operational
 - *“The IVR shall be able to add additional capacity within 10 business days or less to meet its response time.”*

Lessons Learned--Requirements

- Written
- List, not structured
- Not all testable
- Not all user driven
- Included the user, overwhelmed, then excluded

Lesson Learned--Budget

- Reduced budget
- Best in the business didn't respond
- Limited selection of vendors
- Negotiations challenging

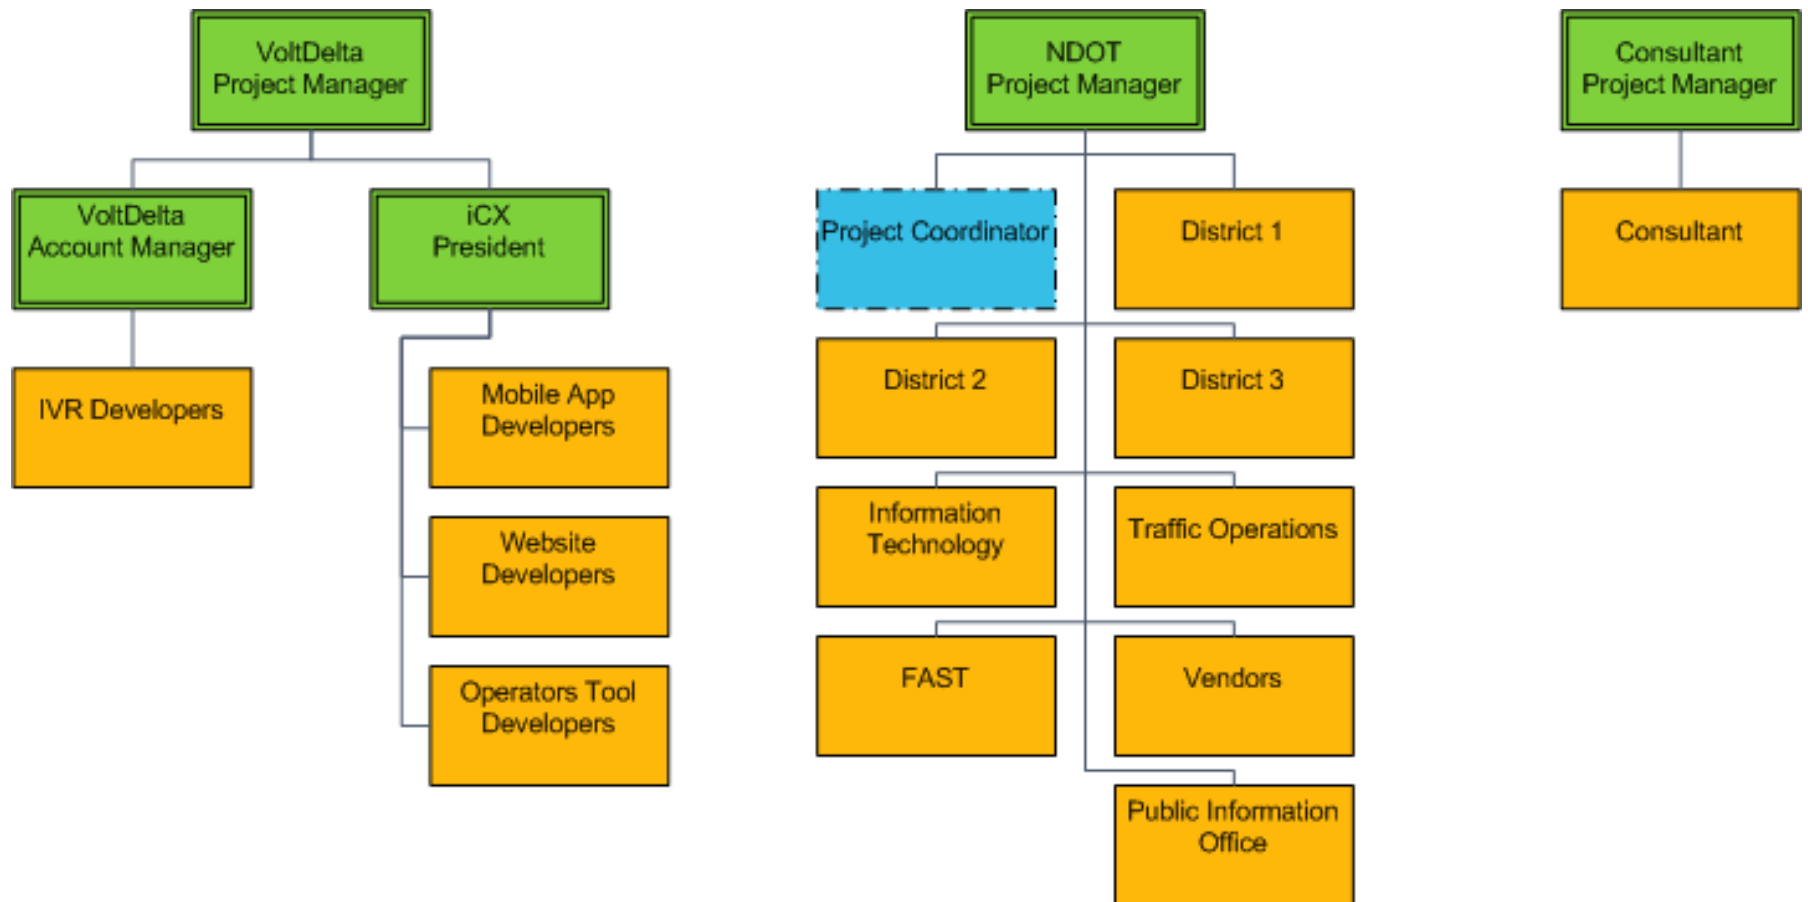

RFP Process

- Selected vendor one
- Negotiations broke down
- Selected vendor two
- Negotiated agreement
- Started project

Project Structure—Phase One

Documentation Required

- Request for Proposal (RFP) Response
- Communications Plan
- Program Management Plan
- Monthly Status Reports
- Work Breakdown Structure
- Staffing Plan
- Cost Plan (Budget)
- Schedule
- Configuration Management Plan
- Risk Management Plan
- Performance Monitoring/Quality Assurance Plan
- Transition Plan
- Operations and Maintenance Manual
- Training Plan
- Subcontractor Management Plan
- System/Software Design (SDD) Document
- Design Requirements Traceability Matrix
- Factory Integration and Test Plan
- Factory Test Procedures
- Factory Acceptance Test Report
- Corrective Action Plan
- NNG511 Interface Control Specification
- System Operations and Maintenance Manual
- Meeting Agendas and Minutes

March 2013

- Deadline looms—May 2013
- No product delivery
- Still working on documentation
- Multiple spiral reviews still planned
- Risk management process

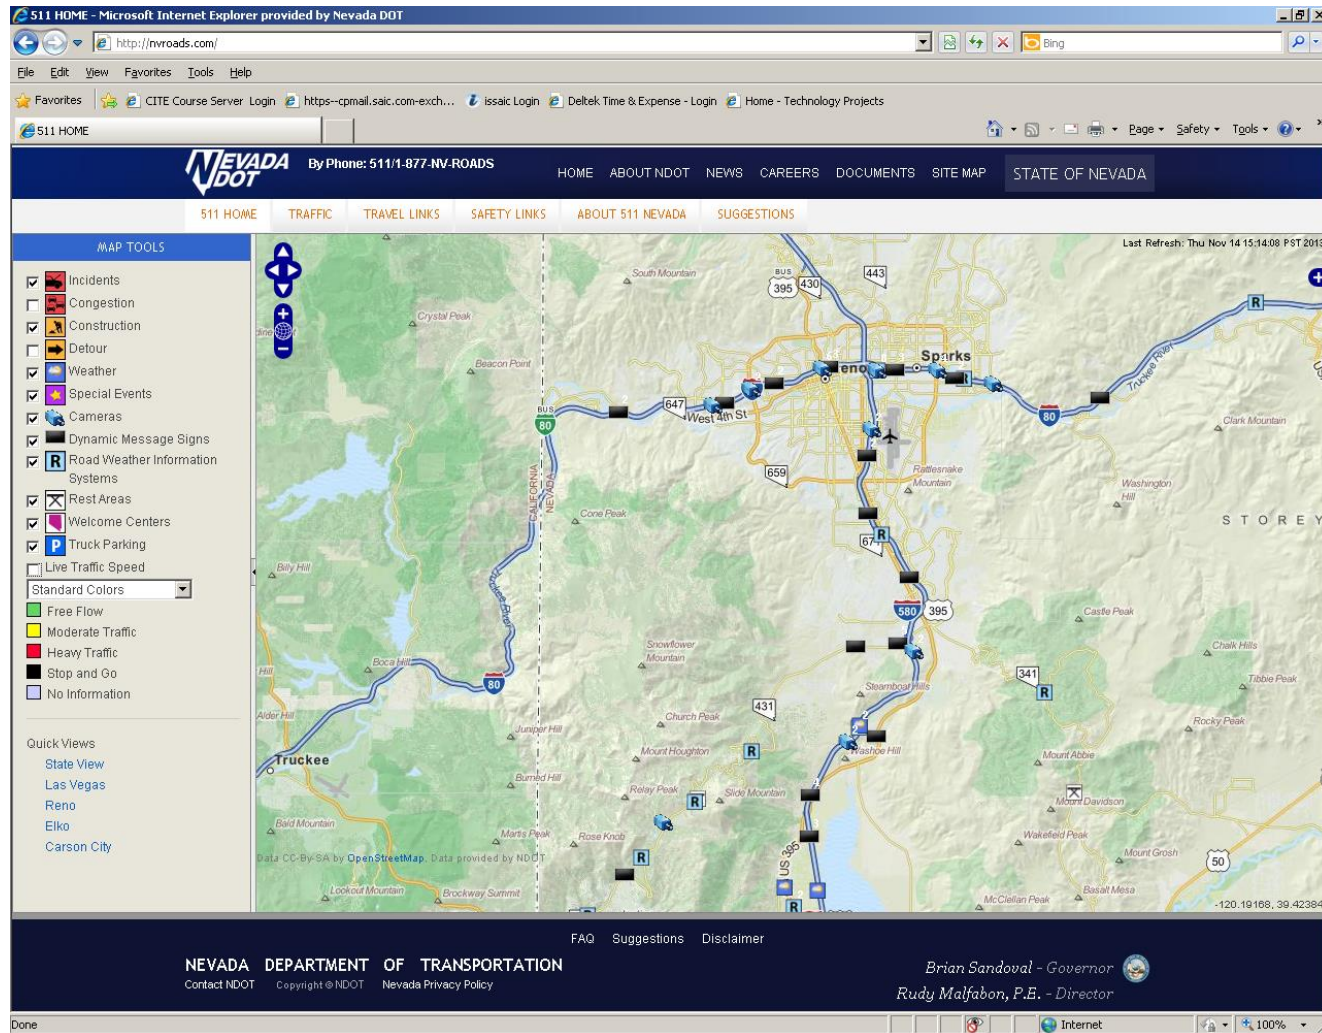

Lesson Learned--Process

- Documentation overload
- Not enough progress
- Risk assessment
- Change in strategy

NVRoads.com

Project Schedule

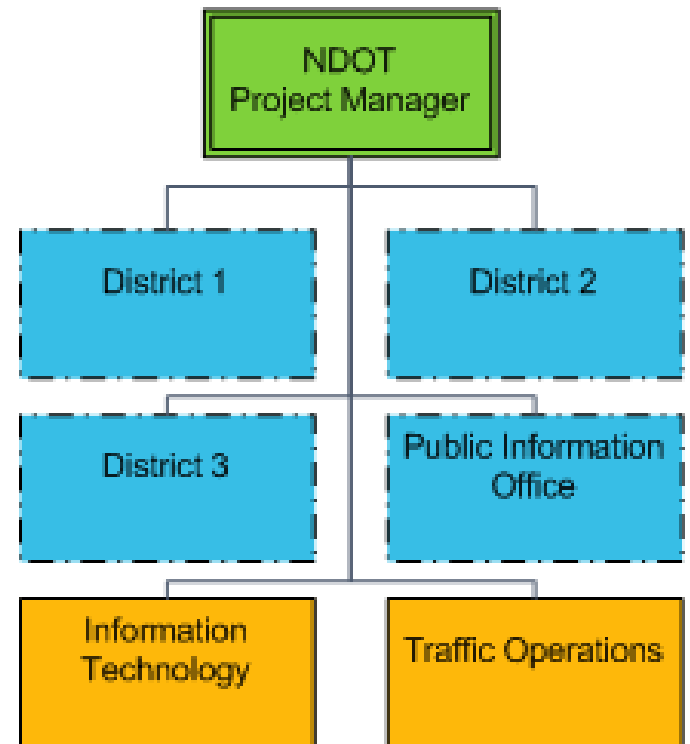

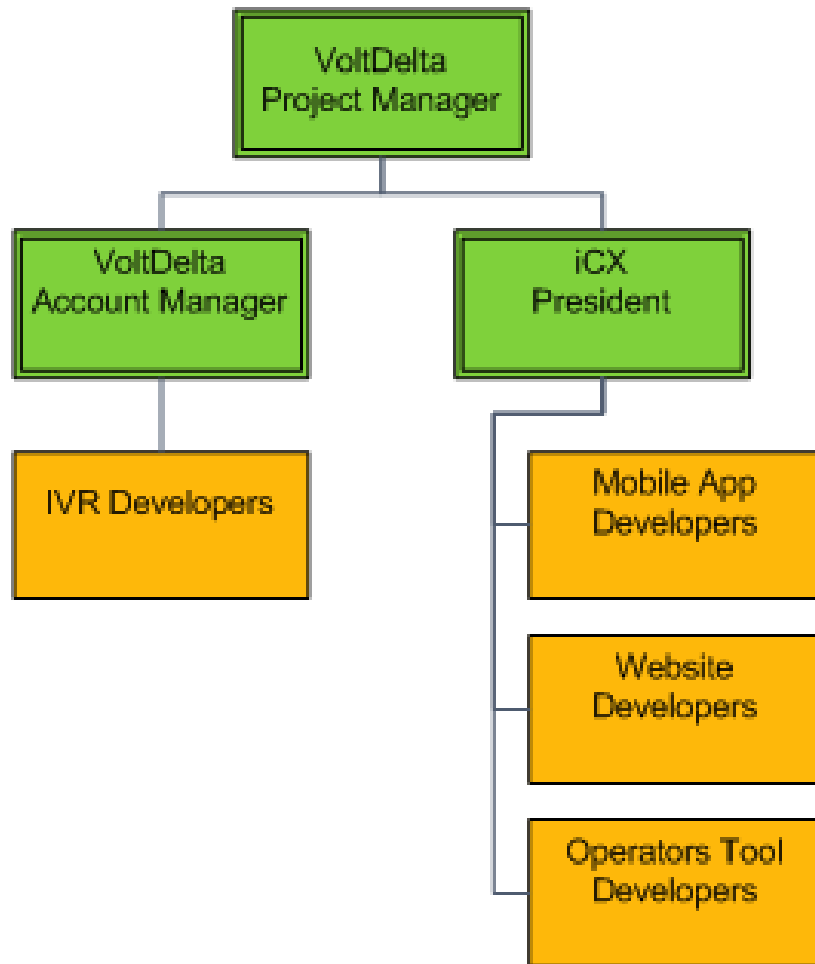

Phase 2

- Changed Project Manager
- Single point of contact
- Smaller circle of stakeholders
- Iterative development (Agile)
- Change management process

Project Structure—Phase Two

Lessons Learned--Stakeholders

- Single point-of-contact
- Monthly district ROC meetings
- Monthly status to district traffic engineers
- Stakeholders meetings on specific topics—e.g. condition layers

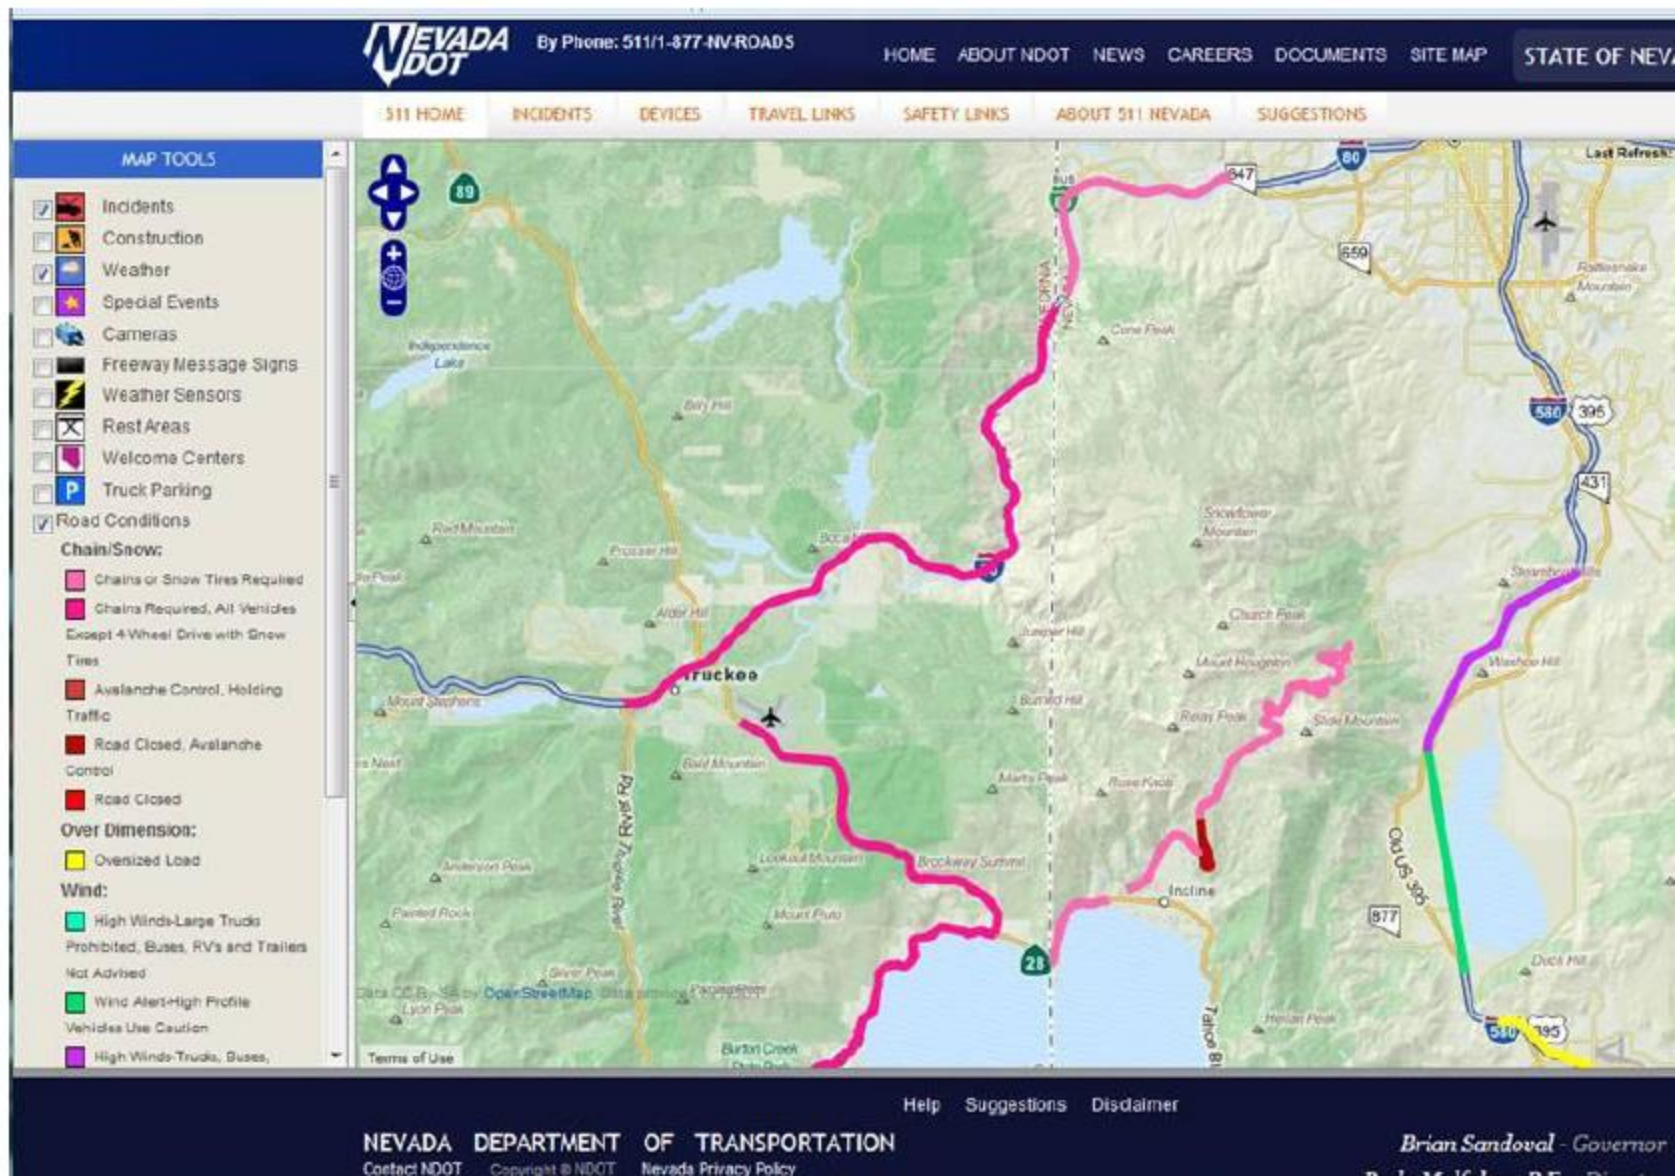

Change Management Board

- Road Operation Center representatives
- Traffic Operations representatives
- Rotating chairmanship
- Maintains log of requested changes
- Meets quarterly
- Documentation of process

Lesson Learned--Stakeholders

- Vocal stakeholders
- Levels of authority
- Internal perspective
- Public opinion
- Condition Layer

Modified Project Schedule

More enhancements

- New set planned for 2014

- Documented using Agile “user stories”
- Used team approach
- Approved by CMB
- Test driven development approach
- Iterative development

Lesson Learned--Budget

- Pay me now—Pay me later
- Original Contract + Condition Layer + Enhancements = Original Budget

Lessons Learned

- Process
 - Not too much or too little
 - Flexible
- Requirements
 - Testable
 - Change control
- Stakeholders
 - Right people
 - Right number
 - Right level of involvement
- Budget
 - Needs to match the requirements
